Corporate Profile

HES is a leader in the fabrication and supply of stainless steel rigging, railing, glass and associated products. Together with our partner Jinfen we offer world class products at affordable pricing. We supply individual components, custom made posts and rigging fittings.

Our goal is to supply "The most comprehensive, premium quality, product range available". Our experienced staff will provide solutions for all types of projects.

</tr>
</tbody>
</table>

**Grades:**

There are many grades of Stainless Steel, the majority of stainless steel items in this catalogue are grade 304 and 316.

Grade 304 is the most common stainless steel, and satisfies a broad demand for adequate performance at an affordable price. It has good corrosion resistance in a wide variety of environments.

Grade 316 has a higher level of corrosion resistance. Grade 316 is often referred to as "marine grade". Typical applications are architectural components where they are exposed to extreme weather and climatic conditions. It is a suitable choice for outdoor use.

**Corrosion Definition**

When stainless steel is produced, the chromium forms an outer oxide layer. As long as this layer remains intact, the stainless steel remains passive. But once the oxide layer begins to break down, the stainless steel becomes active and its corrosion resistance is reduced, and rust stains will be seen.

**Stainless Steel “Tea Staining”**

Stainless Steel may suffer from a brown discoloration, or "tea staining" over time. It is a visual impairment only, and does not affect the structural integrity or the longevity of the material.

The staining occurs most commonly within about 5 kilometers from the sea and becomes progressively worse closer to the marine source. However, wind exposure, pollution and higher temperatures can create environments where tea staining might occur 20 kilometers or more from sea water.

**How to deal with “Tea Staining”**

A) Specify Grade 316 Stainless Steel

Grade 316 is ideal for marine and highly corrosive environments.

B) Maintain regularly

Stainless steel is maintenance free but maintenance friendly. When using stainless steel material outdoors, you need to clean periodically, especially in corrosive environments like coastal areas or swimming pools. Rain washing regularly will reduce the risk of tea staining. The best way is to wash with soap or mild detergent and warm water followed by rinsing with clean cold water. The appearance of the surface can be improved further when wiped dry.

C) Installation and Inspection

After installation, the completed structure should be washed and inspected for imperfections or contaminants caused in the installation process. If discovered, imperfections should be cleaned off and polished with a suitable stainless polish.
